CAREER OBJECTIVE

Aspiring Software Engineer and AI/ML Developer with a strong foundation in Python, SQL, object-oriented programming, and data structures & algorithms. Passionate about building scalable software solutions, writing clean and testable code, and solving real-world problems. Seeking an entry-level opportunity at Infosys to apply programming skills, SDLC knowledge, and data-driven approaches while continuously learning and contributing to impactful solutions in a dynamic environment.

EDUCATION

Acropolis Institute of Technology & Research

B.Tech in Computer Science (Data Science); CGPA: 7.2

Indore, M.P.

Nov. 2022 – May 2026

St. Thomas School

Higher Secondary Education (12th); Percentage: 75.41%

2022

TECHNICAL SKILLS

Languages: Python, SQL, C

Frameworks/Libraries: Pandas, NumPy, Scikit-learn, FastAPI, Flask

Data Analysis & Visualization: Excel, Matplotlib, Seaborn, Exploratory Data Analysis (EDA), Statistical Analysis

Core CS Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS

Testing & Tools: Manual Testing, STLC, Unit Testing, Pytest, Git, GitHub, Postman, JIRA

Machine Learning: Supervised Learning, Regression, Classification, Generative AI

Databases: MySQL

EXPERIENCE

Generative AI Training

Trainee

Indore, M.P.

July 2025 – September 2025

- Completed training in Generative AI concepts, LLMs, prompt engineering, and AI application development.
- Worked on practical exercises related to AI tools, use cases, and model evaluation techniques.

PROJECTS

CureNet - AI-Based Stroke Rehabilitation Planner | Python, Flask, SQLAlchemy, MySQL

- Developed a full-stack web application following SDLC principles to generate personalized rehabilitation plans for stroke patients based on individual health data.
- Designed a rule-based system with machine learning concepts and OOP principles to adapt therapy plans dynamically; managed relational DB schema using SQLAlchemy ORM.
- Implemented a structured interface for patient data management and progress monitoring; wrote unit tests using Pytest for core logic validation.

Driver Drowsiness Detection System | Python, OpenCV, Dlib, NumPy

- Developed a real-time driver drowsiness detection system using computer vision techniques and applied algorithmic problem-solving.
- Extracted facial features and calculated Eye Aspect Ratio (EAR) and Mouth Aspect Ratio (MAR) for fatigue detection.
- Implemented an alert mechanism to notify the driver upon detecting signs of drowsiness.

ACHIEVEMENTS & CERTIFICATIONS

- **Google Advanced Data Analytics Professional Certificate** – Gained practical knowledge in data analysis, visualization, and machine learning concepts.
- **Machine Learning (Supervised) Certificate** – Learned fundamental ML algorithms including regression and classification techniques.
- **AI & Deep Learning Workshop** – Hands-on experience with AI concepts and deep learning applications.
- **Deloitte Data Analytics Job Simulation (Forage)** – Completed real-world tasks involving data analysis and business insights.

EXTRACURRICULAR ACTIVITIES

- Actively engaged in self-learning through online platforms in Data Analytics, Machine Learning, and Software Engineering.
- Regularly practice DSA problems on LeetCode to strengthen algorithmic thinking and coding skills in Python; exploring software testing methodologies including STLC and test case design.
