CAREER OBJECTIVE

Python Developer and AI/ML Enthusiast with a strong foundation in machine learning, data structures, and applied statistics. Skilled in building end-to-end ML-driven applications, from data preprocessing and model development to deployment. Seeking an entry-level Python / AI-ML role to apply programming skills, ML fundamentals, and analytical problem-solving to build intelligent, real-world solutions.

EDUCATION

Acropolis Institute of Technology & Research

B.Tech in Computer Science (Data Science); CGPA: 7.2

Indore, M.P.

Nov. 2022 – May 2026

St. Thomas School

Higher Secondary Education (12th); Percentage: 75.41%

2022

TECHNICAL SKILLS

Languages: Python, SQL, C

Machine Learning / Deep Learning: Supervised Learning, Regression, Classification, Computer Vision, Neural Networks, Model Evaluation, Generative AI, LLMs, Prompt Engineering

Statistics & Analytics: Statistical Analysis, Hypothesis Testing, Exploratory Data Analysis (EDA), Time Series Analysis, Probability, Forecasting

Frameworks/Libraries: Pandas, NumPy, Scikit-learn, OpenCV, FastAPI, Flask

Data Visualization: Excel, Matplotlib, Seaborn, Tableau

Databases: MySQL, SQLAlchemy, SQL Querying

Core CS Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS

Tools: Git, GitHub, Postman, Pytest, Unit Testing, Docker

EXPERIENCE

Generative AI Training

Trainee

Indore, M.P.

July 2025 – September 2025

- Completed hands-on training in Generative AI, LLM fundamentals, prompt engineering, and Agentic AI application development using state-of-the-art LLM models.
- Practiced LLM evaluation techniques, model output assessment, and LLMOps fundamentals through applied AI use-case exercises.

PROJECTS

CureNet – AI-Based Stroke Rehabilitation Planner | Python, Flask, SQLAlchemy, MySQL, ML

- Built a data-driven rehabilitation planning system that analyzes patient health data to generate personalized therapy plans, applying machine learning concepts to dynamically adapt recommendations.
- Designed and queried a relational database schema (MySQL, SQLAlchemy ORM) to structure and manage patient health records for model input and progress tracking.
- Validated core prediction and rule logic with Pytest unit tests, ensuring model output reliability prior to deployment on Render.com.

Driver Drowsiness Detection System | Python, OpenCV, Dlib, NumPy

- Built a real-time computer vision model to detect driver fatigue, applying facial landmark detection and feature engineering for live video frame analysis.
- Engineered Eye Aspect Ratio (EAR) and Mouth Aspect Ratio (MAR) metrics from extracted facial features to classify drowsiness states with low-latency inference.
- Implemented a real-time alert mechanism triggered on classification thresholds, demonstrating applied ML for safety-critical anomaly detection.

ACHIEVEMENTS & CERTIFICATIONS

- Google Advanced Data Analytics Professional Certificate** – Statistical analysis, hypothesis testing, regression, classification, and data visualization.
- Machine Learning (Supervised) Certificate** – Core ML algorithms including regression, classification, and model evaluation.
- Deloitte Data Analytics Job Simulation (Forage)** – Real-world data analysis tasks translating raw data into business insights.

EXTRACURRICULAR ACTIVITIES

- Continuously strengthening problem-solving and algorithmic skills through consistent practice in Data Structures & Algorithms, alongside self-driven learning in Data Science and Machine Learning.
