CAREER OBJECTIVE

Computer Science graduate (Data Science specialization) with a strong foundation in Python, object-oriented programming, and database systems, built through hands-on academic projects. Skilled in debugging, writing unit tests, and validating APIs, with a keen eye for detail and strong analytical and logical thinking. Eager to bring a quality-focused, detail-oriented approach to a collaborative engineering team while continuing to learn and grow.

EDUCATION

Acropolis Institute of Technology & Research

B.Tech in Computer Science (Data Science); CGPA: 7.2

Indore, M.P.

Nov. 2022 – May 2026

St. Thomas School

Higher Secondary Education (12th); Percentage: 75.41%

2022

TECHNICAL SKILLS

Languages: Python, SQL, C

Software Testing & QA: Manual & Functional Testing, Unit Testing (Pytest), API Testing (Postman), Test Case Design, Bug Reporting & Debugging, SDLC/STLC Concepts

Frameworks & Tools: Flask, FastAPI, REST APIs, MySQL, PostgreSQL, SQLAlchemy, Git, GitHub

Core CS Concepts: Object-Oriented Programming (OOP), Data Structures & Algorithms (DSA), DBMS

Cloud & Deployment: Cloud deployment (Render.com), Docker (containerization basics), exposure to CI/CD concepts

PROJECTS

CureNet – Stroke Rehabilitation Planner | Python, Flask, SQLAlchemy, MySQL

- Developed a full-stack web application end-to-end, from database schema design (MySQL, SQLAlchemy ORM) to backend logic and deployment, following an iterative, self-reviewed development cycle.
- Wrote and maintained Pytest unit tests to catch bugs early, and documented setup, module structure, and known issues to make the codebase easy to hand off or revisit.
- Debugged deployment and environment issues independently while shipping to Render.com using a Git-based version control workflow.

Driver Drowsiness Detection System | Python, OpenCV, Dlib, NumPy

- Built a real-time computer vision application, troubleshooting frame-processing performance issues to keep detection latency low.
- Engineered and validated Eye Aspect Ratio (EAR) and Mouth Aspect Ratio (MAR) metrics through iterative testing against sample video data.
- Documented the detection pipeline and threshold logic for maintainability and future tuning.

Syntrix – AI-Powered Document Management Platform (Ongoing) | Python, FastAPI, PostgreSQL, SQLAlchemy

- Developed RESTful APIs for user authentication and secure document management using FastAPI, with JWT-based login and registration.
- Validated API endpoints using Postman, verifying request/response behavior, authentication, and error handling.
- Performed database validation using PostgreSQL and SQLAlchemy to ensure data integrity, following a modular, Git-based project structure.

ACHIEVEMENTS & CERTIFICATIONS

- **Generative AI & LLM Training** – Hands-on training in Generative AI, LLM fundamentals, prompt engineering, and Agentic AI application development (Jul-Sep 2025).
- **Google Advanced Data Analytics Professional Certificate** – Statistical analysis, hypothesis testing, regression, classification, and data visualization.
- **Machine Learning (Supervised) Certificate** – Core ML algorithms including regression, classification, and model evaluation.
- **Deloitte Data Analytics Job Simulation (Forage)** – Real-world data analysis tasks translating raw data into business insights.

EXTRACURRICULAR ACTIVITIES

- Continuously strengthening problem-solving and algorithmic skills through consistent practice in Data Structures & Algorithms, alongside self-driven learning in software testing and development.
